TURFACE® INFIELD CONDITIONERS

BETTER COLORS | BETTER PERFORMANCE

THE #1 CONDITIONERS FOR SAFE & PLAYABLE FIELDS

TURFACE® INFIELD CONDITIONERS

YOUR HOME FIELD ADVANTAGE™

PLAYABILITY. SAFETY. CONFIDENCE.

No other brand of infield conditioner is used more than Turface® for managing moisture, improving drainage, and keeping skinned surfaces safe and playable. Its porous, calcined clay construction absorbs more water and resists compaction better than competitive products. And because of its low-bulk density, Turface covers more surface area than other infield conditioners.

▶ TURFACE PRO LEAGUE® ELITE™

Bring major league performance to every game with the Pro League® Elite™ lineup. With four colors to choose from (Heritage Red™, Red, Champion Brown™ and Natural), the Elite products feature a tightly screened, uniform mix of particles that are specially designed for the ultimate fielding and sliding surface. Elite products are highly durable with outstanding absorption for rainout protection.

TURFACE MVP®

No other infield conditioner has been used on more diamonds. Its large particle size resists compaction and controls moisture. It's ideal for infield maintenance as well as construction.

TURFACE QUICK DRY®

The fine particle size makes it the perfect choice for eliminating puddles and standing water. And it works effectively without caking or hardening. There's a reason it's called the game saver!

TURFACE SLIDEMASTER™

An expanded shale topdressing, specially formulated with consistent sub-angular particles that provide the ultimate sliding surface for skinned infields! The particles let water pass through to the infield skin, helping improve water management, especially in hot or dry weather.

TURFACE® PROLINE™

This specially formulated, bright white and easy flowing crushed white calcium carbonate is ideal for use wherever lines must be highly visible.

CONDITIONERS

TURFACE® PRO LEAGUE® ELITE™ CONDITIONERS

More than any other infield conditioner, Turface® Pro League® Elite™ gives athletes at every level of play the opportunity to safely and confidently compete. The smaller, uniform particle size creates a consistent infield surface to minimize injuries from bad hops. The particles also provide a cushion for sliding or diving.

PRO LEAGUE® ELITE™ HERITAGE RED™

An appealing and rich cherrywood color, whether it is wet or dry.

PRO LEAGUE® ELITE™ RED

This classic color is a popular choice to enhance infield appearance.

PRO LEAGUE® ELITE™ CHAMPION BROWN™

A unique, deep, dark color for a first-class look and provides excellent ball visibility.

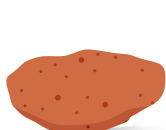

PRO LEAGUE® ELITE™ NATURAL

Non-dyed conditioner delivers exceptional performance and a classic look.

THE ADVANTAGES OF CALCINED CLAY—THE INSIDE STORY

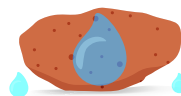

Inside each bag of Pro League Elite are Turface® calcined clay particles. Compared to vitrified clay, shale or brick dust, these particles are proven to be the most effective for managing moisture and improving drainage on skinned infields. Their degradation is also just 3% over 20 years—far superior to other conditioners that break down or melt back down to clay in a few days.

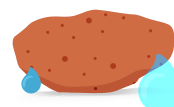

Each calcined clay particle is like a tiny sponge, full of absorbent pores, and capable of absorbing its weight in water.

When it rains, excess water is wicked away from the infield clay and absorbed inside the particle, helping to eliminate rainouts.

When the particle reaches “field capacity,” or can’t hold any more water, it allows the excess water to drain even faster than sand.

As the field begins to dry, particles gradually release stored moisture back into the infield mix, extending ideal moisture levels.

ELEVATE THE APPEARANCE AND PLAYABILITY OF YOUR SPORTS FIELD WITH PRO LEAGUE ELITE COLORS

The four colors in the Pro League Elite lineup give you options to create a playing surface that is uniquely yours. These examples show how a single color can enhance a ballpark's appearance, and how the use of multiple colors can create a one-of-a-kind look.

Georgia Tech, home of the Yellow Jackets, chose Pro League Elite Champion Brown to give its ball field a new and distinct look.

This unique checkerboard pattern was featured at the Little League Softball World Series at Alpenrose field in Portland, Oregon.

Host facility Wooster High School has the mound ready for the Nevada High School Division One Championship Game.
