INSTALLATION: Use the following formula to determine the amount of Turface to incorporate into the skinned infield mix. Infields should be amended at 15% to 20% by volume, 4 inches deep.
Turface tons required = area x depth of incorporation (in inches) x desired % of Turface (20% = .2)/667

For example: To determine the amount of TURFACE required to amend an infield skinned area of 9000 sq. ft. at a depth of 4 inches at a 20% volume:

$$9000 \times 4 \times .2 / 667 = 10.79 \text{ tons of TURFACE}$$

Typical Infield Mix	Regulation Baseball* Softball		Little League*
	(in tons)	(in tons)	(in tons)
1 ton per 1000 square feet	10	9	3

*Assumes grass infield; double the amount of Turface if completely skinned.
For higher clay content increase rate by 50%.
